

# EFVA ATTLING

## STOCKHOLM

### **GENERAL USE AND CARE INSTRUCTIONS**

To ensure your Efva Attling jewellery gives you joy for many years, it is important to take care of it in the best way possible.

Keep it in the accompanying box when not wearing it. Wipe with a polishing cloth after each use to remove make-up, grease, odours, etc. Take jewellery containing precious stones to a jeweller once a year to check stones and mountings. Remove your jewellery when bathing, doing the dishes, gardening, etc. to protect it from unnecessary wear. Avoid sleeping with jewellery on, which also exposes it to unnecessarily hard wear. No metal, including silver and gold, can tolerate salt or chlorinated water.

### **SILVER JEWELLERY**

Efva Attling Stockholm uses nickel free 925 silver. Silver can sometimes darken, i.e. become oxidized. This can be due to the minerals and salts secreted by the body and can be remedied using "Silver dip", a product available from specialist retailers.

### **GOLD JEWELLERY**

Since gold itself is the most malleable and durable metal, gold jewellery is a good investment. In order for your gold jewellery to last a lifetime, you need to take good care of them. After each use, it is a good idea to wipe your gold jewellery with a polishing cloth.

### **WHITE GOLD JEWELLERY**

White gold jewellery is electro-plated with rhodium, a white precious metal, to give it additional lustre, which can wear off. The outer layer can be renewed by taking the piece to a jewellery store for re-plating if so desired.

### **PEARLS**

Pearls should be wiped after use with a lightly moistened cloth. To ensure they retain their lustre it is important that they do not come into contact with substances that have a degreasing effect, such as perfume and dish soap. It is best to keep pearls covered (but avoid using cotton balls, which has a desiccating effect). Clean your jewellery regularly and it will retain its appearance.

### **CARE INSTRUCTIONS (SPECIFIC) FOR BALLS COLLECTION**

#### **Necklace and cuffs**

When cleaning, use only cloth. Do not dip in liquid, fluid into balls can cause damage to the jewellery.

#### **Rings and earrings**

Clean with polishing cloth but can also be dipped in more severe oxidation.

#### **General for the Balls collection**

After use, the jewellery should be wiped with a tack cloth or other soft cloth. When the jewellery is not used, it should be kept in its silk bag or box so no scratches occur during storage.
